

NORDIC RECMOBILE™

Wireless HD quality debriefing recorder for mobile use.

smart and
easy
learning

-  fully battery operated
-  HD quality
-  wireless cameras
-  easy to use
-  wireless vital capture

OVERVIEW

The Nordic Simulators RecMobile debriefing recording system is very easy to use, giving the user a fast and versatile HD-quality system. Delivery includes a laptop with integrated multi-channel recorder, three wireless HD digital cameras with microphones and wireless integration with the patient manikin's vital monitors. All of this is delivered in a single wheeled transport case, which you can take even into an airplane. The system is ready to be used in just five minutes after opening the case.

EASE OF USE

All of our recorders run the same debriefing software. Familiarity with one recorder means that you can use them all. The main goal in our product development has been to create a product that is user-friendly and whose basic set-up can be learned in just five minutes. Our target is for the training instructor to be able to focus on medical factors without having to worry about technical details during the training. The user interface is simple to operate and all unnecessary buttons have been removed. All this is possible because the product has been developed in cooperation with end users.

use symbols with chapter marks

SOFTWARE

The software captures wirelessly and simultaneously several streams (HD-quality cameras, sounds and vital monitor information). Important teaching points can be chapter marked in the recording during training. Then in debriefing the chapters can be checked directly. So there's no need to review the entire training session. You can also write your comments to accompany the chapter marks and use preset symbols that assist in debriefing.

During debriefing, you can freely choose the camera view you wish to follow or the microphone recording to playback. You can also use line-in audio or our wireless microphones.

An easy-to-use user interface

Easily controlled HD cameras (optional)

HARDWARE

All cameras are digital IP cameras with HD quality. The cameras have built-in microphones. You can also add, as options, high-quality zooming and 360-degrees-rotation camera, which can be controlled from software. The cameras have infrared lights with night recording options to enable training in special circumstances – for example in power-loss scenarios. No-fuss magnet attachment simplifies set-up of the cameras. Cameras with batteries allow fully wireless operations.

1. HD quality video stream
2. Vital monitors
3. Start/stop recording
4. Playback list
5. Modify your system
6. Info screen
7. Create chapter marks
8. Write comments to chapter marks
9. Open pan/tilt/zoom camera control
10. Change screen layout
11. Log out or connect another recorder
12. Power off
